Subject: ETS samples

Dear Kim,

As I mentioned yesterday, we will be needing the following items related to the temporary storage and shipment of ETS samples:

- Styrofoam shipping container (approx. 12" x 10" x 6") to hold about 20 sample tubes and filter cartridges
- Gel-paks (2) to keep the samples cool
- Temporary storage of the samples in freezer until the last day of the ETS measurements
- Isopropanol for cleaning out instruments at the end of the experiment each day
- Aluminum foil
- Plastic bags (e.g. those used for keeping food fresh) for storing the sample tubes and filter cartridges
- At the end of the experiments, we need to ship the samples to Oakridge National Laboratory, I will provide the address when we are in MDS.

I am sorry that we only received operating instructions for the Oakridge instruments yesterday and could not give you the above list beforehand.

I look forward to meeting you and thank you for your help with our ETS study.

Regards,

Raymond Lau
